

# An introduction to Extended Events

Are you ready to dive into the awesome world of MSSQL Extended Events! In this presentation, we'll explore this great feature in Microsoft SQL Server that helps you monitor and troubleshoot database performance.

We'll start by understanding what Extended Events are and when they come to the rescue. You'll learn how to set them up step-by-step, customizing them to capture the data you need and show you how to look into the results.

But wait, there's more! We'll also compare Extended Events with the traditional SQL Server Profiler, so you'll know which one to pick for different situations. Plus, we'll share some nifty scripts to start with them right away.

# Extended Events

# **XE vs Profiler**

Item	SQL Server Trace	SQL Server Extended Events
GUI Pre-2012	Classic GUI	No GUI, Query should be done through XML
GUI	Classic GUI	GUI with options as Grouping, Filtering, Differences between grid and details
Overhead	Synchronous capture Much more overhead	Asynchronous capture Less overhead
Server/Client	Only for you	Everybody can see and use your trace
Events	No new ones since 2012, so stuck at 180 events	Added each version of SQL (SQL Server 2022 has almost 2500 events!) Azure
Causality Tracking	No ☹️	Yes! 😊
Configure by SQL	More complex syntax	Better granular control
Built-in Replay	Capture and replay	You need to use other tools
Combine with perfmon	Available	Not available

# Set up an Extended Event

# Object Explorer
