Microsoft Fabric adoption roadmap

Area Description

- Data culture: Data culture refers to a set of behaviors and norms in the organization that encourages a data-driven culture. Building a data culture is closely related to adopting Fabric, and it's often a key aspect of an organization's digital transformation.
- **Executive sponsor:** An executive sponsor is someone with credibility, influence, and authority throughout the organization. They advocate for building a data culture and adopting Fabric.
- Business Alignment: How well the data culture and data strategy enable business users to achieve business objectives. An effective BI data strategy aligns with the business strategy.
- 4 Content ownership and management: There are three primary strategies for how business intelligence (BI) and analytics content is owned and managed: business-led self-service BI, managed self-service BI, and enterprise BI. These strategies have a significant influence on adoption, governance, and the Center of Excellence (COE) operating model.
- Content delivery scope: There are four primary strategies for content and data delivery: personal, team, departmental, and enterprise. These strategies have a significant influence on adoption, governance, and the COE operating model.
- 6 Center of Excellence: A Fabric COE is an internal team of technical and business experts. These experts actively assist others who are working with data within the organization. The COE forms the nucleus of the broader community to advance adoption goals that are aligned with the data culture vision.
- Governance: Data governance is a set of policies and procedures that define the ways in which an organization wants data to be used. When adopting Fabric, the goal of governance is to empower the internal user community to the greatest extent possible, while adhering to industry, governmental, and contractual requirements and regulations.
- 8 Mentoring and user enablement: A critical objective for adoption efforts is to enable users to accomplish as much as they can within the quardrails established by governance quidelines and policies. The act of mentoring users is one of the most

Dealing with current costs

Inventory your estate

Rightsize

Monitor everything

Stop guessing at load

Track and surface resource costs to stakeholders

Dealing with future costs

Plan the execution, execute the plan

Pre-pay everything

Make it easy to do it right

Understand the available tools

Consider **new** ways of solving old **problems**

Prioritize training

Keep technical debt to a minimum

Big drivers of **cost** are rarely **technical**

Governance makes it easier to do it right

People remain the most important assets
